The Comprehensive Learning Environment
It's Learning Reimagined

eNgageli

Engageli is a purpose-built comprehensive environment designed to foster active, collaborative learning, and deeper peer-to-peer connections in corporate training, working sessions, and company meetings. With a browser-based application, in addition to the native application for Windows and macOS, Engageli contains a suite of features enabling an always-on, inclusive, engaging experience for participants, as well as tools to increase engagement, identify at-risk employees, and develop data-driven approaches in-person, virtual, and hybrid, flexible ("hyflex") environments.

Built To Create Community Through Social, Flexible, and Active Learning

Small collaborative groups support dynamic, frictionless interactions that coexist within a larger group setting, much like study groups in a well-designed active learning classroom.

- Peer groups of two to 10 per table
- Table and Room audio modes promote peer-to-peer discussion without interfering with the training or meeting environment
- Chat with tablemates, all participants, or meeting hosts / training instructors
- Threaded Q&A functionality
- Polls and quizzes integrated into materials, no need for additional tools
- Downloadable notes feature with time-synced content screenshots and annotations

Designed for Digital Inclusivity and Accessibility

Browser-based access for all participants, including those without the newest computers, mobile devices, or the fastest internet connections.

- Purpose-built for optimal video, audio and content delivery
- Reduced bandwidth requirements to provide a consistent, high-quality experience
- Seamless support for hybrid sessions, synchronous/ asynchronous access
- Recordings with closed captioning for interactive and collaborative, asynchronous collaboration via an Engageli Playback Room
- Engagement and participation tools for participants to contribute in the ways in which they are most comfortable

> "The first time I used Engageli all I had to do was look at the animated faces of my students as they were sitting at their tables to know it was working. It allowed them to connect and interact with each other as naturally as they may have done if we were in person.
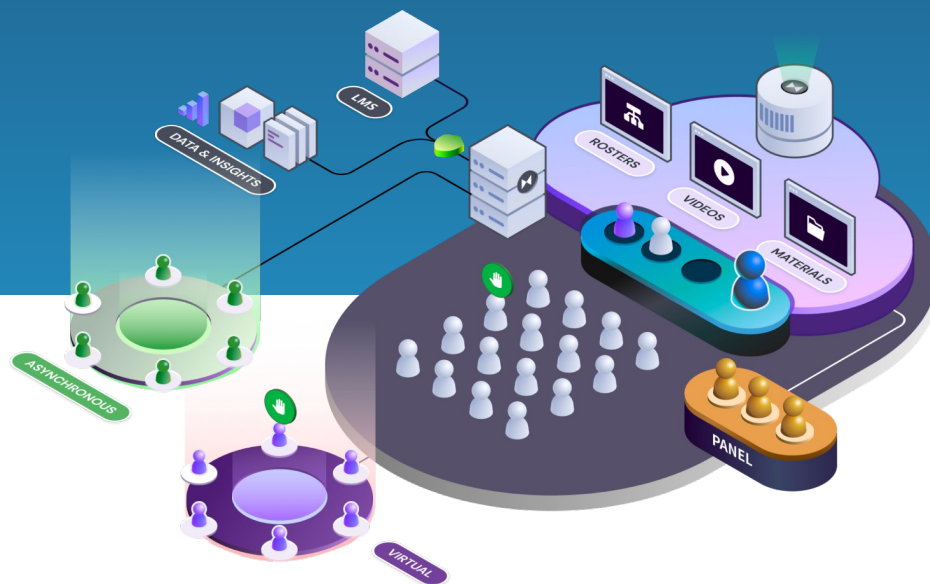

Wendy Zajack
Professor, Georgetown University
